

DAISEY Report Guide

Iowa Home Visiting Capacity and Engagement Report

Purpose of Report

This document will guide DAISEY users through the Capacity and Engagement Report. This report combines Iowa Home Visiting capacity and engagement data to assess program utilization and family engagement.

Report Layout

This report is comprised of seven dashboards.

- ✱ Capacity
- ✱ Discharge Reason
- ✱ ECI Eligibility
- ✱ Disengagement
- ✱ Home Visit Tracker
- ✱ Home Visit Rating
- ✱ Engagement Strategies

Dashboard descriptions and context for each can be found below.

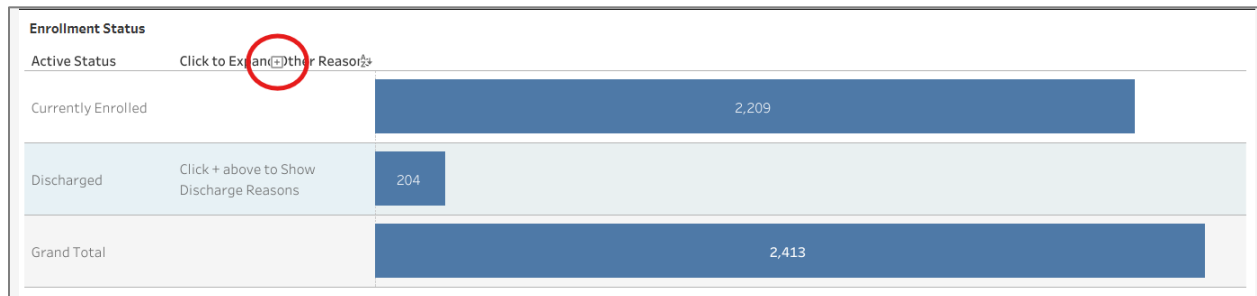

Capacity

The Capacity dashboard represents the number of active families at the end of a period, and number of families served. In this dashboard, 'Caregivers Active in Period' column indicates the family has been enrolled at least one day during the selected date range.

Discharge Reason

The Discharge Reason dashboard represents the number of families discharged during the period, and their discharge reason. The discharge reasons can be viewed by overall Enrollment Status and by a table that lists discharge dates and reasoning by Caregiver DAISEY ID. Caregivers who appear

in discharge date categories under the Currently Enrolled section are missing a discharge date. To view other reasons for discharge, select the '+' icon to expand the graph.

ECI Eligibility

The ECI Eligibility dashboard indicates the number of families with children age 0 through 5 who meet ECI eligibility criteria based on the following characteristics.

- ✱ Low Income: <= 200% FPL (EAR-Primary Caregiver IHV & Caregiver Profile)
- ✱ Pregnant and Under 21 (Caregiver Profile)
- ✱ Child Abuse and Neglect (EAR-Primary Caregiver IHV)
- ✱ Substance Abuse (EAR-Primary Caregiver IHV)
- ✱ Low Student Achievement (EAR-Primary Caregiver IHV)
- ✱ Child Developmental Disability (EAR-Child IHV)
- ✱ Armed Forces/Military (EAR-Primary Caregiver IHV)
- ✱

All data points coming from the EAR-Primary Caregiver IHV are from the Enrollment timing only.

Disengagement

The Disengagement dashboard represents families (primary and secondary caregivers) without home visits.

Additionally, the Disengagement dashboard provides data on the number of caregivers who have had no visit during a previous 30-day period and have since had a visit within the last 30 days. This data indicates those who have previously been disengaged.

Home Visit Tracker

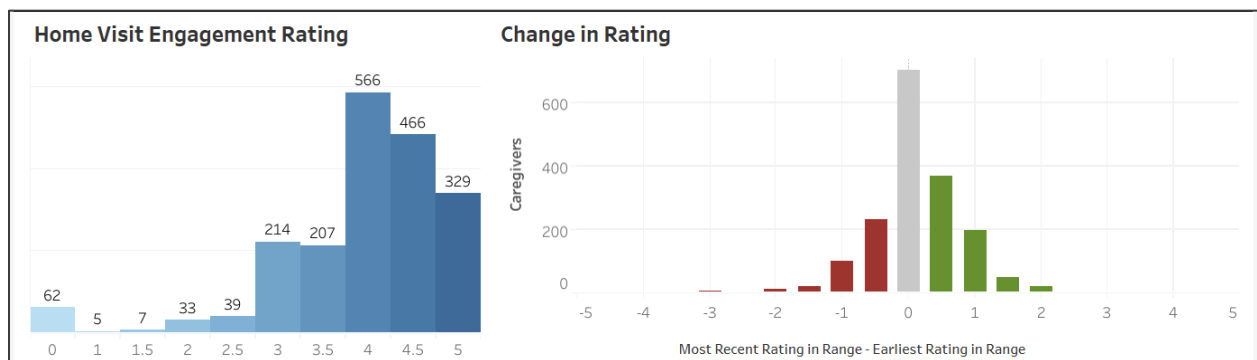

The Home Visit Tracker dashboard represents the following data:

- ✳ Total number of families served during the reporting period
- ✳ Average Number of Home Visits per Month per Family in Range
- ✳ Expected number of completed visits in date range
- ✳ Total number of completed visits
- ✳ Total number of duplicate forms

Please note that any duplicate Home Visit Review Forms are removed from the total number of visits.

Home Visit Rating

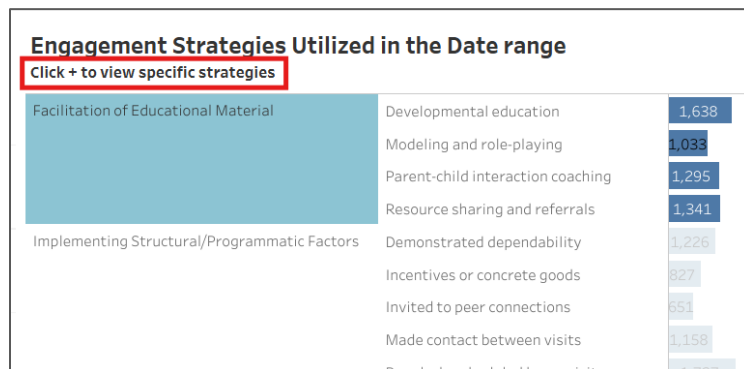

The Home Visit Rating Dashboard represents the rating Caregivers received on the Home Visit Form completed by their Home Visitor. The Caregiver's rating is captured on a scale of 0-5. This dashboard also indicates if a rating has changed over time from the earliest visit in the date range to the most recent in the date range.

Engagement Strategies

The Engagement Strategies Dashboard indicates which strategies are being introduced to caregivers during home visits, and the frequency with which they are being offered. The data is

grouped by categories, with each category housing specific strategies. This dashboard includes **all** home visit review forms in the selected date range.
