KS MIECHV FY2027

Updates to DAISEY data entry

KANSAS
HOME VISITING

HRSA Changes Overview

Form 1 Highlights
MIECHV Update
No change to data entry

- Removal of new and continuing participant categories
- Removal of pregnant and caregiver categories for multiple tables
- Combining similar tables (i.e. housing)

Form 2 Highlights
MIECHV Update
Changes to data entry

- Addition of anxiety screening and referral
- Window for postpartum medical visit extended from 8 weeks (56 days) to 12 weeks (84 days)

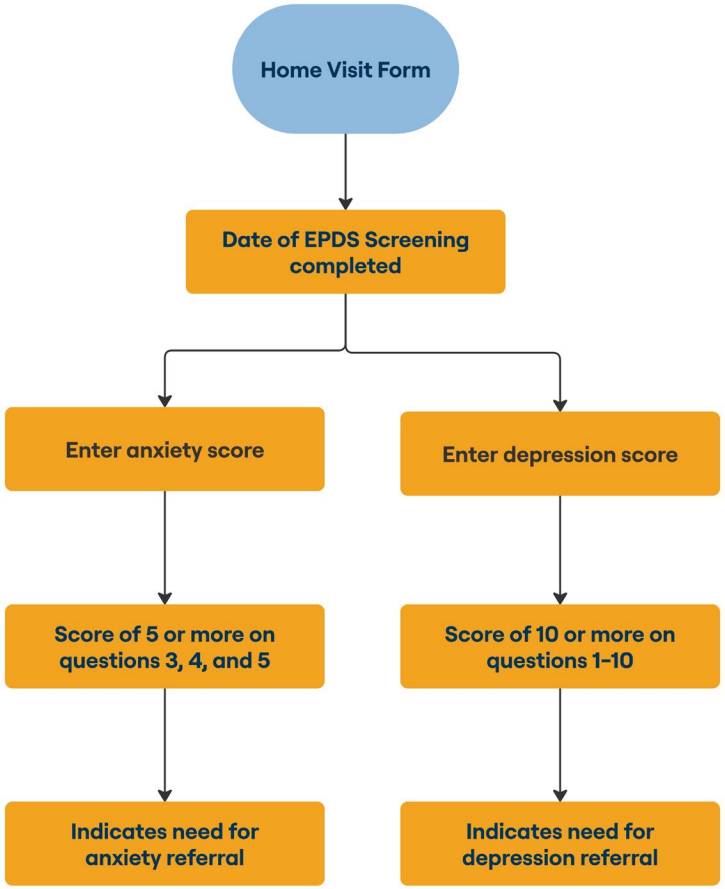

Form 2 Highlights
CQI Update

- Additional variables to be collected for more nuanced understanding of caregiver breastfeeding experience

Form 4 Highlights
MIECHV Update
No change to data entry

- Place-based services moving to Form 1
- Removing Family Engagement table

HRSA Changes – Anxiety Screening

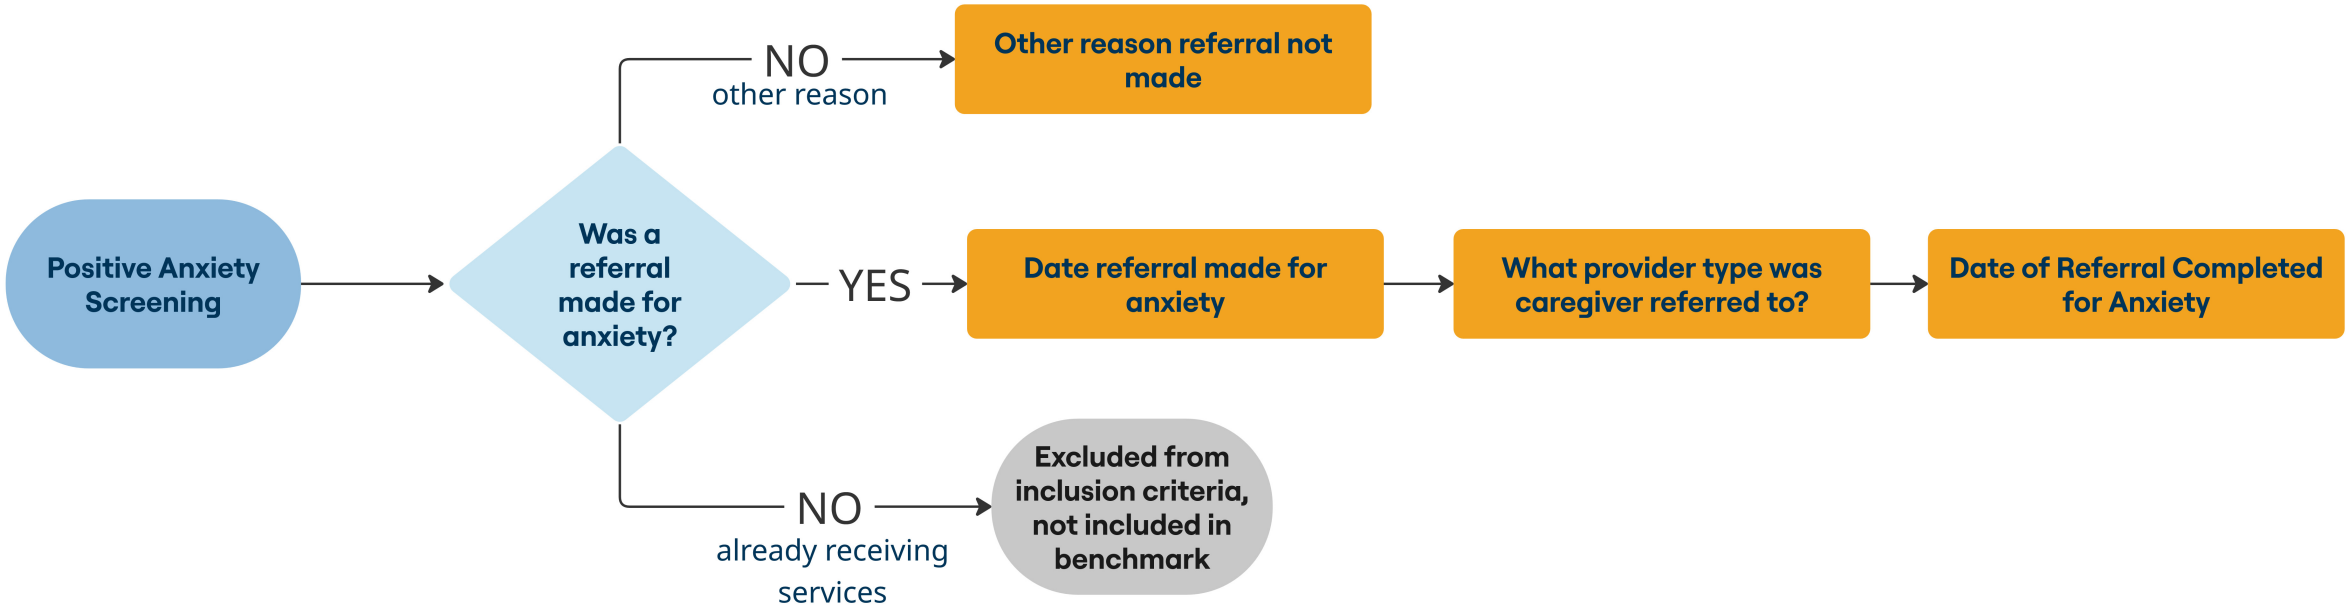

How will anxiety data be collected?

- The EPDS will still be used and is an approved tool for anxiety screening.
- New: home visitors will enter the score for the depression questions and the scores for the anxiety questions. DAISEY will calculate the total.
- EPDS anxiety training will be coming soon.

HRSA Changes – Anxiety Referrals

How will anxiety data be collected?

- In addition to the current fields for depression referrals, separate fields will be added to collect date and outcome of referral for positive anxiety screens.

CQI Breastfeeding Changes

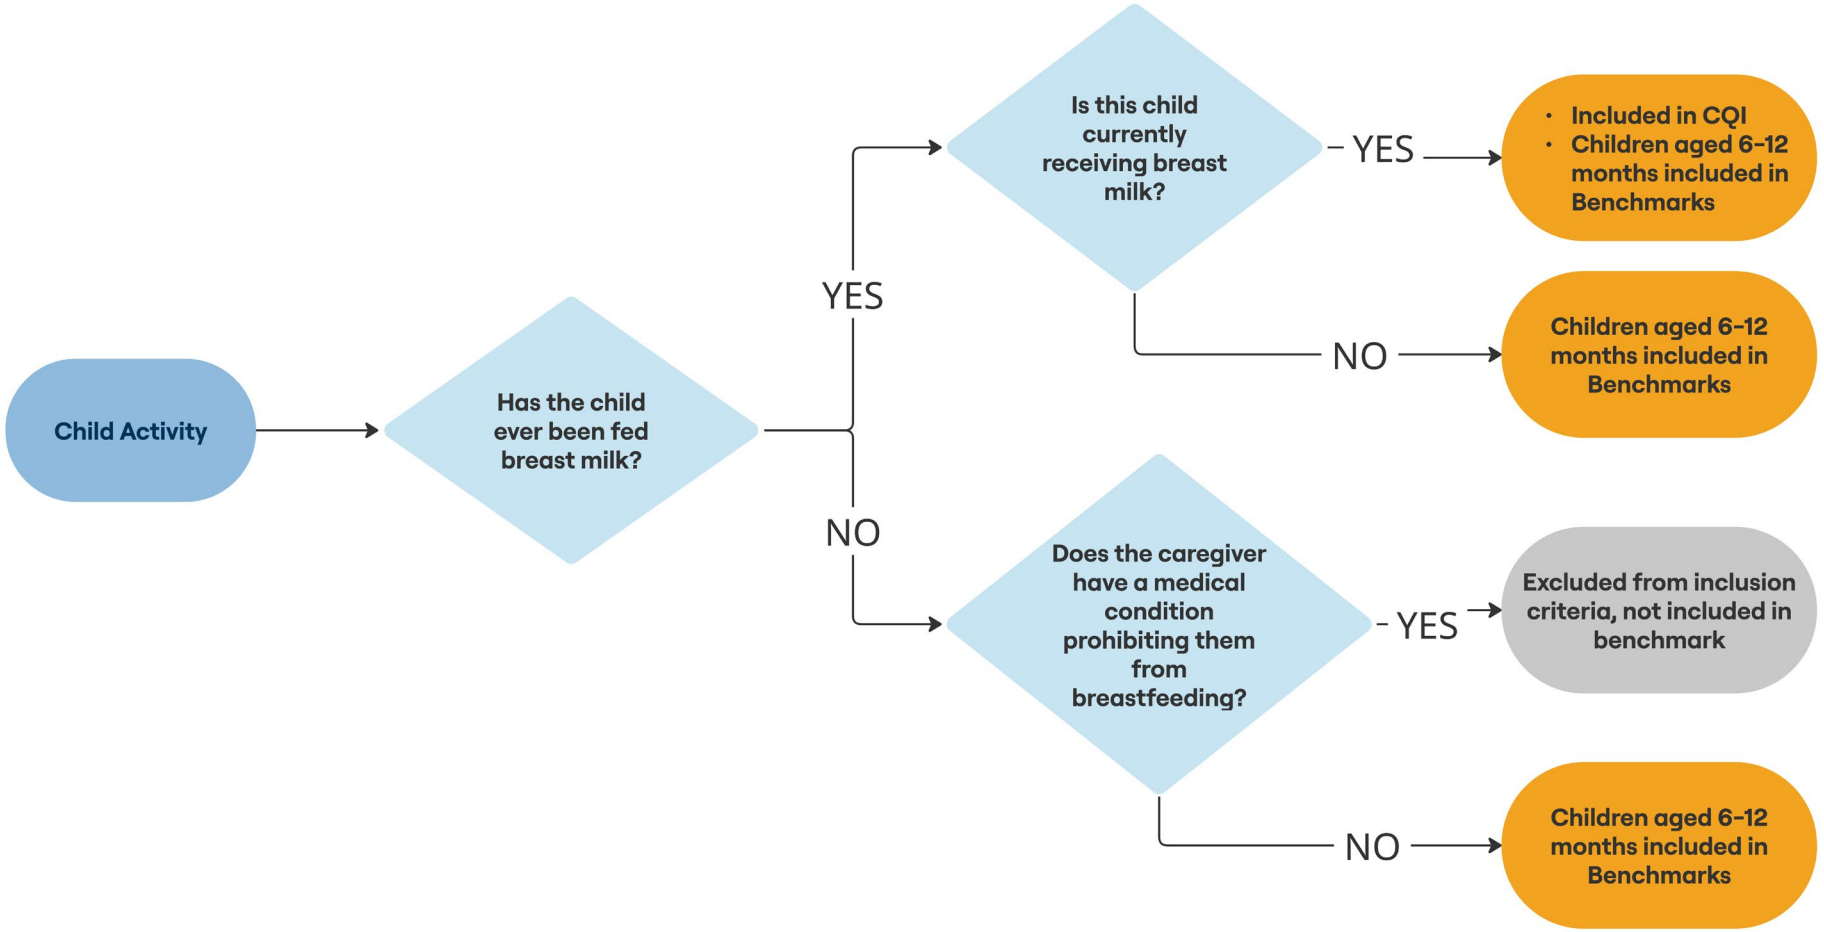

Current data collection

- At enrollment and annually on the Child Demographic Form
- This does not allow for nuance of breastfeeding changes that may happen in child's first year of life
- Children aged 6-12 months included in data collection

Updated data collection

- Breastfeeding information will be collected at each postnatal home visit in the Child Activity form
- Children aged 6-12 months will still be included in data collection
- This workflow will create opportunities to understand breastfeeding habits within MIECHV families

CQI Breastfeeding Changes
