DAISEY Data Entry Workflow

What is a caregiver?

- In DAISEY, “caregiver” is the label used for any adult receiving services from an organization.

What are profiles?

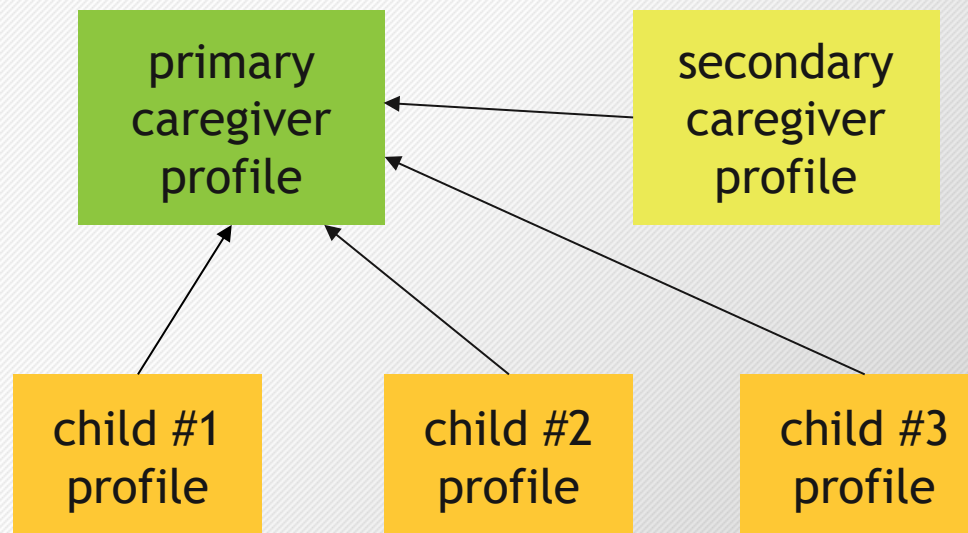

- Profiles are demographic records created for each caregiver and child.
- Each caregiver profile is designated as a primary or not primary (secondary) caregiver for the purposes of linking families in DAISEY.
- A caregiver or child profile may exist in DAISEY without being linked to any other profiles.

Creating families in DAISEY

- Families are created when child or secondary caregiver profiles are linked to a primary caregiver.
