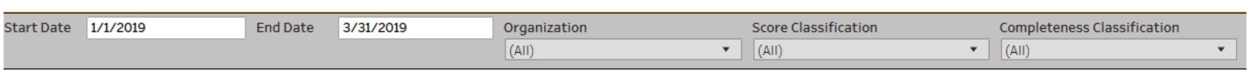
KDHE Report Guide:

KDHE Edinburgh Report

This guide provides an overview of the KDHE Edinburgh Report.

What is the purpose of this report?
The Edinburgh Report is designed to allow users to quickly identify clients with positive screening scores and track their scores over time. Data in these reports come from Edinburgh screenings in DAISEY.

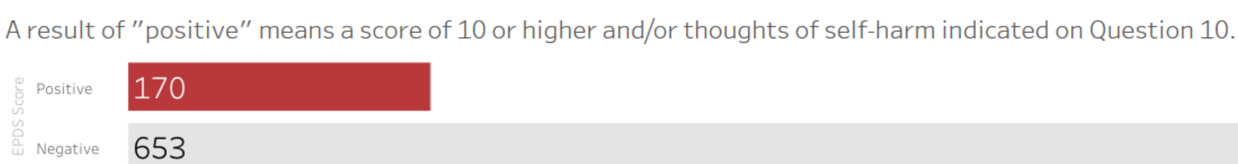
Filters used in this report:
The Most Recent Activities Report can be filtered by Start and End Date, Organization, Score Classification, and Completeness Classification.



The All Activies for Client Report is filtered only by the selected Caregviver ID.

Dashboard 1: Most Recent Activities

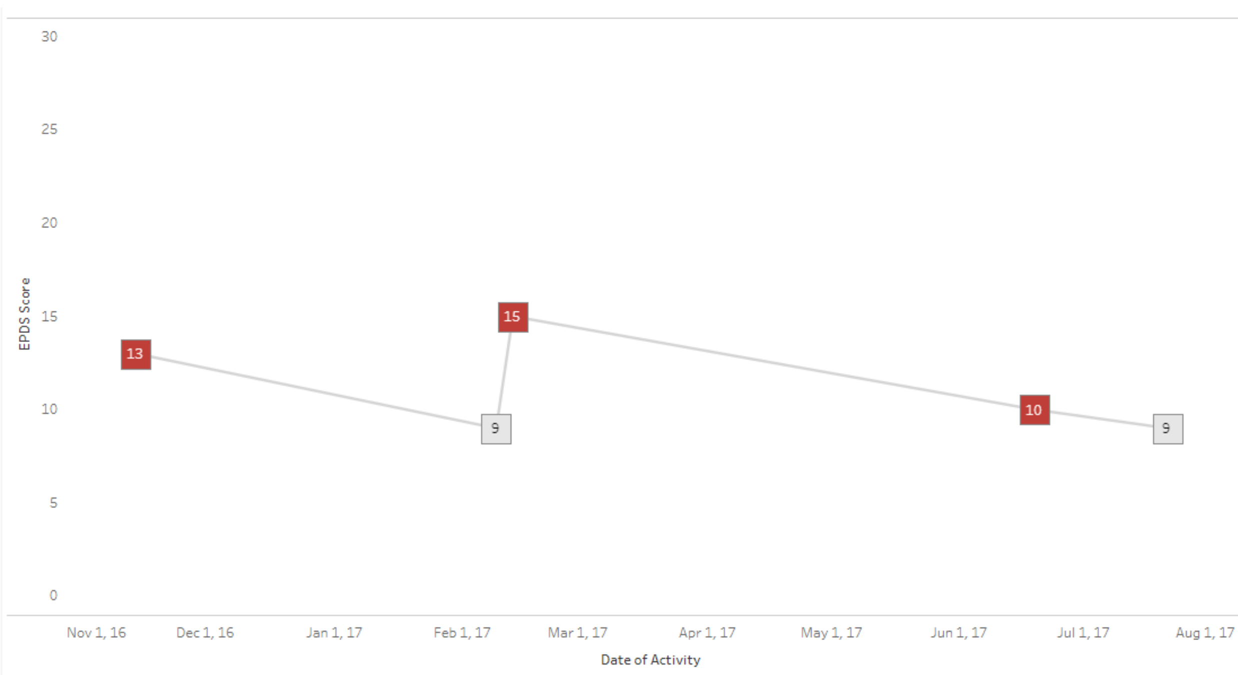
The Most Recent Activities dashboard displays the most recent screening data for all caregivers who have an Edinburgh entered in DAISEY with a Date of Activity within the selected Start and End Date. It includes an overall visualization of positive vs negative scores for your organization, and a table showing each caregiver's most recent Edinburgh score, the response left for question 10, and whether or not the questionnaire was completed.



As noted on the report, a result of positive means that a score of 10 or higher and/or thoughts of self-harm were indicated on the client's most recent screening. All positive scores are highlighted in red in the client data. Screenings in which one or more questions were not answered (incomplete) are highlighted in purple in the client data.

Dashboard 2: All Activities for Client

The All Activities for Client Report includes one filter to view all screenings for a particular client. This filter can be used by scrolling through the client list or typing the client's name or ID in the white search bar that appears at the top of the dropdown. Once a client is selected, the chart will show all screenings completed for that client. Positive screenings will continue to be highlighted in red.



Note: Hovering over each score box will provide additional information including the exact date of the screening, Q10 response, completeness, and the organization that completed the screening.
